STONE CONSTRUCTIONS

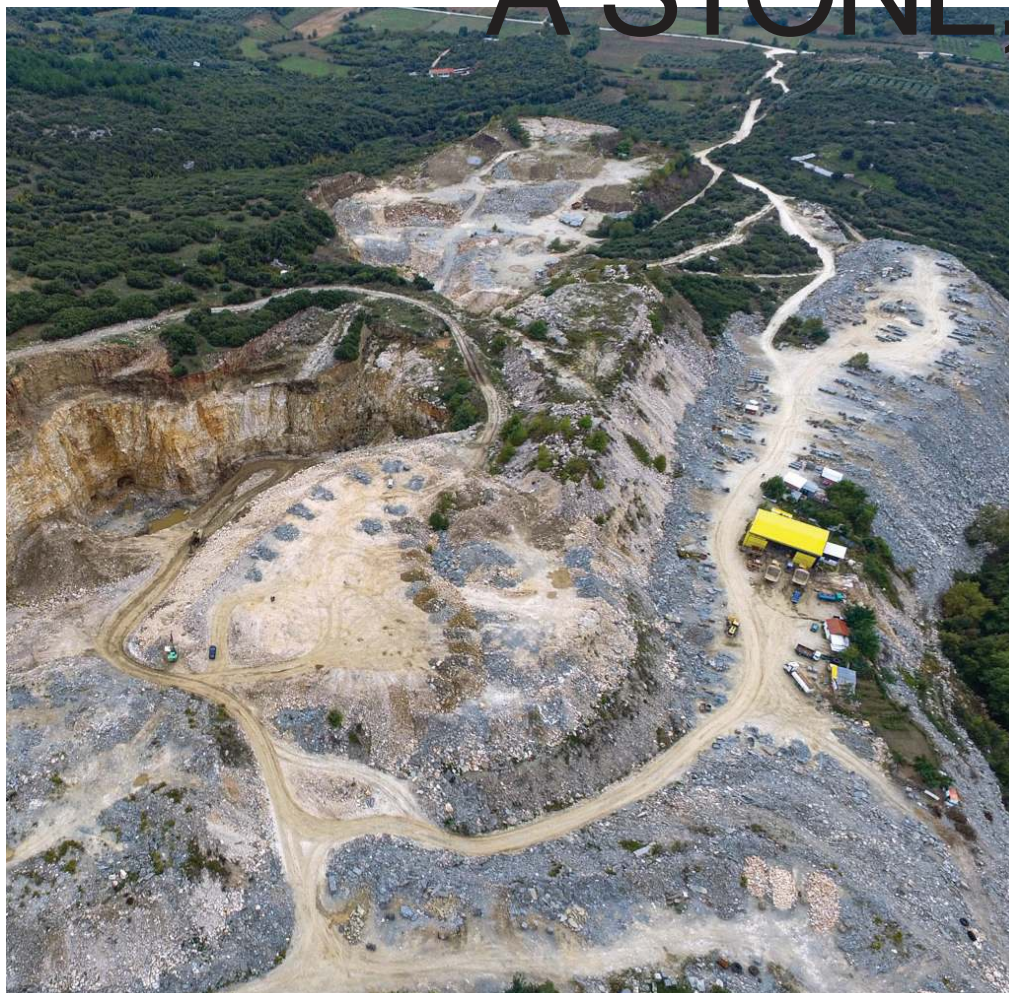

THE ART OF STONE

Throughout the centuries, stone has always been the basis in the construction of every home. The craftsmen who carved each stone were famous in every place for their art and always sought after for their work. Even when this tradition began to decline, when confronted with modern construction materials, the stone regained ground due to its functional, but now also aesthetic characteristics, remaining at the top of the list of key options.

Since 1958, the inhabitants of the Paggaiio Mountain area of Kavala, were looking for natural materials for the construction of their houses. This was because the access to conventional building materials, such as cement and tiles, was fairly limited for the area. Thus, they discovered a unique slate on the slopes of the mountain, which deservedly won its special place, due to its unique characteristics, both in aesthetic value and in the practical functionality of durability and insulation.

010

A STONE, AN ART

, A MASTERPIECE

OUR HISTORY

From the art of traditional stone masonry, until the mid-1970s, slate had already gained its reputation as an ideal material for building, insulating, and decorating houses and structures. And this was exactly the basis on which Georgios Nikolaidis was inspired and founded in 1974 the company S. Nikolaidou & Co., extracting and processing natural stones, on the foot of Paggiao Mountain.

With the gradual development of 7 privately owned quarries and the creation of specialised processing facilities, the company optimised the mining process through its continuous investments in modern and specialised equipment, always focusing on the preservation of the traditional stone processing Art that demands the care of the original product exclusively by the human hand.

Today, the company SNSTONES composes the parameters of its superiority in the fields of processing and trading natural stones and slate products, through the fresh vision of the new generation.

NATURAL STONES SUPPLIER

SNSTONES serves with its products both the Greek and the international market, with a dynamic presence mainly in the European zone, but also in America and Australia, combining experience with know-how, automation with personal care, and international trade with the unique experience of personalised services for all of its customers.

It is purely a family business, which knows the modern requirements of both the customers and the national and international market.

014

KAVALA GREY POLYGONAL SLATE

POLYGONAL SLATES

The natural surface of any polygonal slab and tile of slate or marble, is the top choice for indoor and outdoor flooring, while, in particular, marble can also be used as an exceptional option for wall cladding.

From the large single slate rocks, located at a depth of up to 75 meters in the quarries of Paggaio Mountain, the hand of the craftsman isolates polygonal slabs, preserving their natural surface, in shades of grey.

STONE PRO-FIT

For the decoration and cladding of interior and exterior facades and spaces of buildings, SNSTONES provides you with specialised options of limestone marble, which cover all the aesthetic and functional requirements of each and every space.

From the traditional aesthetics of the stone building, to the most modern perception, the limestone marble is shaped in a way that preserves its natural exterior surface, but also has an inner flat surface for its optimal adaptation and application.
